

TEST SCRIPT

Hello <subject_name>,

First, I'd like to thank you for your time today. As you have already been made aware, you'll be testing an interactive peer-to-peer classroom application using paper models. This may seem strange but, the data collected helps us figure out what alterations we can make to our design to better improve our system. With this end in mind, I'd like to ask you to be as vocal as possible and voice your opinions during the test. Don't be afraid to let us know if you think an idea is awful; honesty is key. Also, please keep in mind that we are evaluating the competency of our designs and not that of you.

Alright, before we start testing, I'll need you to fill out a short little questionnaire right before we start.

➔ *User completes the pre-test questionnaire.*

Ok let's get started! These pieces of paper will be used to simulate the functionalities of our app. I'd like you to pretend this is a real smartphone and press any buttons according to how you see fit. Do the action that seems most natural to you.

Every time you reach a new page, I'd like you to explain what you think the page is for, what its features are for and what each feature does.

- ➔ *Show the user the first prototype*
- ➔ *Prompt the user to fulfill the user tasks for prototype 1, one-by-one and see how they respond*
- ➔ *Allow the user to explore the app and run through as many features as they can*
- ➔ *Collect feedback from the user after using the system*

I'm going to show you a slightly different variation of the system. Run me through your thought process on each page and explore much in the same way you did with the first system.

- ➔ *Show the user the second prototype*
- ➔ *Prompt the user to fulfill the user tasks for prototype 2, one-by-one and see how they respond*
- ➔ *Allow the user to explore the app and run through as many features as they can*
- ➔ *Collect feedback from the user after using the system*

Perfect, we're almost done. I just need you to fill out one more questionnaire.

➔ *User completes the post-test questionnaire.*

Awesome! We're all done here. Thank you for helping us out with our project.
